

BUILDING FOR NIGHT ENTERTAINMENT

LOCATION: Modena
 CLIENT: UM PROGETTI CARPI
 ARCHITECTONICAL DESIGNERS:
 Francesco Fulvi, Matteo Martiniello, Simona Bernardoni
 COLLABORATOR: Valentina Buratti
 TOTAL AREA: 5.500 sqm
 DATES AND PLANNING: 2010 - Preliminary Proposal

The idea of the proposal is to create, near the ring road of Modena, a building closed towards the interior, but at the same time that is clearly visible and recognizable from the outside.

Like a toy box, the building hides inside spaces dedicated to entertainment including fun activities for children and adults, disco and restaurant. The glass corner and the cuts of the windows reveal the ballroom and activities giving great visibility to the ring road and establishing connections with the outside, especially due to the lifting from the ground of the building envelope and to the translucent covering that characterizes the facades. The building livens up at sunset, with light effects that filters from inside illuminating the translucent panels of the covering and projecting outside colors and shadows.

On the second floor, in addition to the space devoted to disco there is a large terrace covered by a flat amorphous silicon photovoltaic shelter, able to produce and accumulate during the day, the energy required for nighttime functioning.
